

971 Optical Cable Construction

Preview

This standard defines the general characteristics of fiber submarine cable systems. The document covers key parameters such as optical transmission, mechanical strength, and environmental. The purpose of this Recommendation is to identify the main features of optical fibre submarine cable systems and provide generic information on relevant Recommendations in the field of optical fibre submarine cable systems. This Recommendation was firstly issued in 1993. The latest, up-to-date edition. Simple online access to standards, technical information and regulations.

Summary Recommendation ITU-T G.971 applies to optical fibre submarine cable systems. The purpose of this Recommendation is

This Recommendation applies to optical fibre submarine cable systems. The purpose of this Recommendation is to identify the main
