

Are cable trays made of sheet metal

Preview

Common cable trays are made of galvanized, aluminum, or glass-fiber reinforced plastic. The material for a given application is chosen based on where it will be used. Galvanized tray may be made of pre-galvanized steel sheet fabricated into tray, or may be hot-dip galvanized after fabrication. When galvanized tray is cut to length in the field, usually the cut surface will be painted with a zinc-rich compound to protect the metal from corrosion.

SFSP cable trays and accessories from SFSP are manufactured from steel sheets in accordance with BS EN 10130/BS EN 10131/ BS EN 10051, complying with BS EN 61537:2023, and NEMA standards,

Cable tray is considered to be a system. It must provide continuous support for cables, and the electrical continuity of the cable tray system must be maintained.

Cable Tray Materials: Most cable tray systems are fabricated from a corrosion-resistant metal (low-carbon steel, stainless steel or an aluminium alloy) or from a metal with a corrosion-resistant finish

Cable Duct and Conveyor Systems Gersan also manufactures all kinds of carrier systems for hanging sheet metal cable ducts.

The document specifies requirements for cable trays, including that they be fabricated from galvanized sheet steel in standard lengths and widths. It
