

Article Overview

A 1200mm depth network cabinet in Cambodia can be installed efficiently using pre-assembled, EIA-compliant cabinets with vertical and horizontal cable management, leveling feet, and removable panels for easy access.

Cabinet Selection

For a 1200mm depth installation, choose cabinets that are EIA-310 compliant 19" racks, compatible with standard servers and networking equipment. Options include 42U or 48U height cabinets with 800mm width to optimize space while allowing sufficient rear clearance for cable management and airflow . Pre-assembled cabinets with heavy-duty casters and leveling feet simplify placement and stability .

Cable Management

Effective cable management is critical for 1200mm deep cabinets. Look for cabinets with:

- o Vertical cable management bars running the full height of the rack for structured routing .
- o Horizontal cable channels for patch panels and switch connections .
- o Top and bottom cable entry points with brush or cellular grommets to prevent dust ingress and maintain airflow .
- o Compatibility with high-capacity cable management accessories that attach to rack mounting rails .

Installation Considerations

- o Access and mobility: Use pre-installed casters for initial positioning, then secure with leveling feet for permanent installation .
- o Door and panel flexibility: Removable side panels and reversible front/rear doors allow easier equipment installation and maintenance .
- o Airflow management: Ensure front-to-rear airflow by leaving space for perforated doors and optional fan trays to prevent overheating .
- o Safety and compliance: Cabinets should meet IP20 safety rating and include lockable doors for security .

Local Suppliers in Cambodia

- o IT Solution Digital offers high-quality server racks and network cabinets with fast delivery in Phnom Penh, suitable for both small and medium data centers .
- o Legrand Cambodia provides a range of racks and cabinets for IT networks, which can be customized for
