IEC 60364 is a collection of documents that define fundamental principles, practices, and performance requirements which reflect the European concept of wiring and distribution systems. There are specific rules and standards for installation, handling and maintenance of machines and devices. Every German and European standard has to be approved by a series of institutions, including the "International Electrotechnical Commission (IEC)", the European committee for electrotechnical. The IEC (International Electrotechnical Commission) and BS 7671 (British Standard for Electrical Installations) both provide essential requirements for electrical installations, including those for fuse boards like garage unit, consumer unit and distribution board. Consequently this document uses the writing IEC 61439 / EN 61439 in the following. Additional standards and codes of practice would generally be needed to satisfy a specific application - it is the responsibility of the specifier to select and apply these.
