

Free quote for 4-core fiber optic patch panel

Article Overview

You can request a free quote for a 4-core fiber optic patch panel from suppliers like Fibertronics, CommScope, or Foss, with options for empty, pre-loaded, or pre-terminated panels.

Supplier Options

Fibertronics, Inc. offers a wide range of fiber optic patch panels, including 1U to 4U configurations and custom fiber assemblies. You can request a quick quote by calling (321) 473-8933 or emailing their sales team for a 4-core panel tailored to your needs, including preloaded or empty options . CommScope provides FPX series fiber panels that can be purchased empty or pre-terminated with intrafacility or outside plant cables. Their panels support modular adapter packs and can be configured for single-mode or multimode fibers, making them suitable for small-scale 4-core installations . Foss Fibre Optics offers FP-series and FPM76 modular panels that can be ordered empty, with adapters, or with pre-terminated pigtails and cables. These panels are highly flexible, allowing you to scale or customize your 4-core setup while maintaining neat cable management .

Key Considerations

- o Panel Type: Empty panels allow field termination, while pre-terminated panels reduce installation time.
- o Connector Type: Choose LC or SC connectors depending on your network requirements.
- o Fiber Type: Single-mode (9/125 um) or multimode (OM1-OM4) depending on distance and bandwidth needs.
- o Rack Size: 1U to 4U panels are available; a 4-core panel can fit in a compact 1U frame.
- o Customization: Some suppliers offer factory-configured adapters, pigtails, or complete pre-terminated assemblies. To get a free quote, contact the supplier directly via their website or sales email. For example, Fibertronics provides a dedicated contact for custom fiber assemblies, while CommScope and Foss allow online inquiries for pre-configured or empty panels. This ensures you receive pricing and configuration options specific to your 4-core fiber optic requirements.

The 4-core fiber termination box provides a stable, protective joint between optical cable and distribution pigtails at the end of fiber
