Hot-dip galvanized cable trays undergo a galvanization process where the steel tray is immersed in a bath of molten zinc. The process involves several steps, including surface preparation, zinc alloy formation, and cooling. These treating therapy includes multiple benefits and those are, It does not require cutting and bending. It does not have grounding splices. Why Choose Hot-Dip. us-trations without notice. Zinc pro-vide sacrificial protection, which means that it cor-odes while. At the steel mill, pre-galvanized steel is produced. It is less expensive, shiny, and smooth. But since, before we cut it, the metal has been coated, it leaves the edges of the holes uncovered. It is these little naked edges in a moist spot that the rust will.
