

## Article Overview

To connect a gigabit fiber optic router, you need an ONT to convert the fiber signal, an Ethernet cable to link the ONT to your router, and proper configuration of the router's WAN settings.

## Step-by-Step Setup

### 1. Gather Required Equipment

- o Optical Network Terminal (ONT): Provided by your ISP, converts optical signals to electrical signals.
  - o Fiber Optic Cable: Usually pre-terminated with SC/APC or SC/UPC connectors.
  - o Gigabit Router: Ensure it supports fiber input or has a WAN port for Ethernet.
  - o Ethernet Cable: Cat5e, Cat6, or Cat6a recommended for gigabit speeds .
2. Connect the Fiber Cable to the ONT
- o Locate the fiber wall outlet installed by your ISP.
  - o Remove protective caps from both the fiber cable and ONT port.
  - o Carefully insert the fiber cable into the ONT's designated port until it clicks securely .
3. Power On the ONT
- o Plug the ONT into a power source.
  - o Wait 2-5 minutes for the status lights to stabilize, indicating a successful connection .
4. Link the ONT to Your Router
- o Use an Ethernet cable to connect the ONT's LAN or GE port to the router's WAN or Internet port.
  - o Ensure the cable is fully seated in both ports .
5. Power On the Router
- o Plug in the router and wait for it to boot.
  - o Check the indicator lights to confirm the router is receiving a signal from the ONT .
6. Configure the Router
- o Open a web browser and enter the router's IP address (commonly 192.168.1.1 or 192.168.0.1).
  - o Enter ISP credentials if required (username, password, or VLAN/PPPoE settings).
  - o Update firmware to ensure optimal performance and security .
7. Verify the Connection
- o Connect a device via Wi-Fi or Ethernet.
  - o Run a speed test to confirm gigabit speeds.
  - o If the connection fails, reboot the ONT and router or contact your ISP .
- Tips for Optimal Performance
- o Place the ONT and router near power outlets and in a ventilated area.
  - o Use high-quality Ethernet cables (Cat6a or higher) to maintain full gigabit throughput.
  - o Enable Quality of Service (QoS) if you use video calls or gaming to prioritize traffic .
- Following these steps ensures your gigabit fiber optic router is properly connected, configured, and ready to deliver high-speed internet throughout your home or office.
