All you need here is a fiber optic cable and connector along with digital converter. Usually, a multimode, double stranded cable would be good. Ensure there are no splices in the camera. In this video, we walk you through a real-world IP camera installation project that involves setting up a network for 10+ cameras across a 150-meter distance between a garage and a control room. Often the camera will be located remotely and outdoor-rated or direct burial (armored) fiber will be required. Complex installations involving.

By following this step-by-step guide, you can ensure the proper installation of network cabling for CCTV systems, bolstering your security infrastructure and providing peace of mind.
