

How to wire the power supply cabinet to the lighting box

Preview

In brief, you run low-voltage (16/2 or 18/2) wiring from the underside of the cabinet (s) to a location where you can mount a step-down transformer, which provides either 12 volts or 24 volts to power the lights; the line side of the transformer is fed from a switch . In brief, you run low-voltage (16/2 or 18/2) wiring from the underside of the cabinet (s) to a location where you can mount a step-down transformer, which provides either 12 volts or 24 volts to power the lights; the line side of the transformer is fed from a switch . Determine your lighting requirements including the location, number of LED lights needed, and the load requirements for the Power Supply (Driver) by performing a simple calculation*. Plan how your lights will be run. If you want dimming capabilities, make sure the LED lights you purchase can be. Hardwiring under cabinet lighting involves connecting the fixtures directly to a home's electrical circuit, typically controlled by a wall switch, instead of relying on a standard plug-in outlet. Wiring. Remodeling a kitchen and I'm planning on running emt to a junction box that will be located behind the dishwasher that will be used to feed a wiremold power strip under the upper cabinets that are just above the dishwasher. Proper wiring is crucial for ensuring that your lighting system operates safely and efficiently.
