Dental implant bridges, also called implant-supported bridges, are two or more crowns anchored by two implants. This is a good option if you need v...

Article Overview

An implant bridge is a dental solution that uses dental implants to support a custom bridge prosthetic, providing a secure and stable way to replace multiple missing teeth. Unlike removable options, an implant bridge is fixed in place and functions similarly to natural teeth, allowing you to eat, speak, and smile with confidence .

Dental bridges are typically made from materials like porcelain or plastic to match your natural tooth color and can cover one or several missing teeth . In contrast, traditional dental implants replace the roots of missing teeth, while bridges fill the gaps without replacing the roots .

When considering options, it's essential to evaluate the benefits and costs associated with both dental implants and bridges to determine the best fit for your needs .
