Dry cleaning the barrel of a ceramic ferrule with the Chemtronics Ultrajet All-Way compressed gas duster is a very effective means of addressing this problem. However, there are instances where tactile cleaning with a swab is The Better Way. Ceramic ferrules are. Thorlabs offers a family of products to assist customers who would like to terminate their bare fiber, including fiber polishing film for use with ceramic or stainless steel ferrules, polishing pucks, polishing plates, and termination kits. Polishing finalizes the connector endface and cleans the surface, which has a direct impact on optical performance parameters such as insertion loss, return loss, and ultimately bit-error-rate for overall network performance. Reliable polishing processes rely on proper. Proper polishing adhesives for fiber optic ceramic ferrules mean the difference between seamless data transmission and costly maintenance cycles. In one example, an energy source is used to remove excess adhesive from the end face of the optical fiber and possibly the.
