Fiber Optic Converters (also known as Media Converters) are devices that convert the electrical signal used in copper wiring such as Ethernet or Serial Data into light waves for transmission over fiber optic cable. They are commonly used in pairs, one at each end of the fiber cable span, enabling. The MEINBERG fibre optic converters convert an electrical input signal into one or more optical output signals or an FO input signal into one or more electrical output signals. Our. Moxa's Ethernet to Fiber media converters feature innovative remote management, industrial-grade reliability, and a flexible, modular design that can fit any type of industrial environment. However, maximizing their performance requires proper selection, installation, and configuration.
