## Preview

Electricity enters the box via the main breaker from the utility or generator. Breakers direct power to each circuit and trip during overloads. Neutral returns current; ground directs stray. The Integrated Power Electronics Box (IPEB) represents a significant advancement in energy management technologies, centralizing multiple power conversion functions into a single compact unit. Defined as a modular system that combines various essential components such as inverters, chargers, and. The distribution box (DB box) helps safely and efficiently distribute electrical power. Distribution substations connect to the transmission system and lower the transmission voltage to medium voltage ranging between 2 kV and 33 kV. The planning of electric power distribution in buildings and infrastructure facilities is subject to constant transformation.

The box improves the quality of voltage, reduces the power consumption, and makes full use of electrical energy. The box is widely used in city and rural power grid construction and renovation
