

Protective distribution box cable model and specifications

Preview

00 mm², Stranding 64 x 0.10 mm, 2 Million Continuous Flex Cycles, Trailing, Sunlight and Oil Resistant A distribution box -- also called a distribution board, panel board, or breaker panel -- is the central electrical supply hub of any building or facility. It divides incoming power into subsidiary circuits and provides a protective fuse or circuit breaker for each one. The metal distribution box is designed for a wide range of low-voltage applications in residential buildings, commercial complexes, offices, and industrial facilities. It is suitable for environments requiring high mechanical durability, enhanced corrosion resistance, and reliable operational. This publication contains the following new or updated information. This list includes substantive updates only and is not intended to reflect all changes. Cross-linked Polyethylene (XLPE): High thermal performance (90°C). 12 x 0.
