Secondary distribution box: it is applicable to the construction power on the construction site. It is specially designed for the special situation of the project construction site and meets the relevant construction power specifications and standards of the. Whether you are a homeowner tackling a DIY electrical project or an electrician looking to expand your knowledge, this guide will provide you with all the necessary information. From breakers and bus bars to neutral and ground bars, we will explore each component of an electrical sub panel and. The Secondary Distribution Box (SDB) receives power from Main Power Distribution box via an extender cable and provides a central power distribution to feed normal branch circuits to the electric floor modules through snap-on extender cables. The SDB can be fitted with terminal blocks for custom. From the transformer's low-voltage side (0. 4kV), power is distributed to a main distribution panel (primary distribution box). These boxes have inner and outer doors, powder-coated exteriors, and are designed for safety and aesthetic appeal, with rainproof tops for outdoor work.
