

Article Overview

Compact explosion-proof distribution boxes are available in stainless steel, aluminum, and GRP, certified for Zone 1 and Zone 2 hazardous areas with Ex d / Ex tb protection.

Key Features

Materials and Construction: Small explosion-proof distribution boxes are typically made from 316 stainless steel, 304 stainless steel, aluminum, or glass fiber reinforced polyester (GRP), providing high durability and corrosion resistance for harsh environments (Extol International, Pepperl+Fuchs, Warom Group) . **Explosion Protection:** These boxes are designed with Ex d (flameproof) and Ex tb (dust-proof) protection, suitable for Zone 1 (21) and Zone 2 (22) hazardous areas according to ATEX and IECEx standards. Some models also support Ex ia, Ex ib, and Ex op pr for intrinsically safe applications (Pepperl+Fuchs) . **Compact and Flexible Design:** Many small-sized boxes feature specialized hinge structures and modular designs that allow space-saving installation and combination with other units. This ensures adaptability to various distribution systems while maintaining safety and service life (Warom Group, Inatex) . **Certifications and Compliance:** These distribution boxes are ATEX and IECEx certified, ensuring compliance with international safety standards for explosive atmospheres. They are suitable for industrial applications such as chemical plants, oil and gas facilities, and other hazardous environments (Hexlonex, Extol International) . **Customization Options:** Many suppliers offer customizable internal layouts, cable entries, and terminal configurations, allowing integration into existing infrastructure or new installations while meeting specific client requirements (Pepperl+Fuchs, Warom Group) .

Applications

- o Power distribution in hazardous industrial areas
- o Control panels for chemical, petrochemical, and oil & gas industries
- o Terminal and junction boxes for signal and power networks in explosive atmospheres
- o Compact installations where space is limited but safety cannot be compromised

Summary

For small-sized explosion-proof distribution boxes, look for 316 stainless steel or aluminum enclosures with Ex d / Ex tb protection, ATEX and IECEx certification, and modular, space-saving designs. Suppliers like Extol International, Pepperl+Fuchs, Hexlonex, Warom Group, and Inatex provide a range of compact options suitable for Zone 1 and Zone 2 hazardous areas, with customizable configurations to meet specific industrial requirements .
