These symptoms indicate electrical arcing or a severe overload, presenting a significant fire hazard that requires immediate professional attention. Any inspection or repair of electrical components beyond turning off a breaker should be left to a licensed electrician. While a faint, steady hum from a transformer or large appliance is sometimes a normal byproduct of electrical flow, loud or irregular noises often signal an. While some electrical hums are normal, especially when in use, a continuous noise could be a sign of something more serious. While many causes are benign, the most concerning sources can pose significant risks to safety. "Safety starts with inspection: wires and cables should be checked regularly for damage, overheating, or noise that could indicate a potential hazard. "--Tom O'Connor, safety and regulatory affairs manager for Intec, Electrical Contractor Magazine. A thorough system check.
